SUMMARY

Self-taught AI systems builder who designed and shipped a full AI business-automation suite — email quotation drafting, payment-collection automation, GST return drafting, a multi-language voice receptionist, and a live operations dashboard — now 80+ production releases deep, running daily since April 2026 at a real 55-year-old industrial distribution business. Currently productizing the same system as a fixed-scope offering for other SME clients. Also co-founder of an AI SaaS startup and builder of independent web platforms with real authentication and data-security work. Comfortable owning a system end-to-end — architecture, backend, AI integration — and equally comfortable running the client conversation that sells it.

EXPERIENCE

Co-Founder & COO — Framzo Ltd

2024 – Present

AI SaaS · Film Technology

- Co-leading product direction and operations for an AI-powered filmmaking OS — creator tools for hook scoring, emotion mapping, AI script rewriting, and automated shot-list generation, built on React/Next.js with a Python AI backend and vector-search infrastructure.
- Driving go-to-market strategy and investor relations for seed fundraising.

CEO — Pawan Trading Corporation

Jun 2019 – Present

Industrial distribution (J.K. Fenner distributor, trading since 1970) · Hyderabad

- Run sales, marketing, accounts, and client correspondence (domestic and international) for the family-owned business.
- Designed, built, and put into daily production a full AI business-automation suite: an email quotation engine that reads enquiries and drafts priced quotations, automated weekly payment-collection reminders, GST return (GSTR-1/3B) draft computation validated against real filed returns, a Telegram staff command-centre, a live operations dashboard, and a multi-language (English/Hindi/Telugu) AI voice receptionist — all running on Claude (Anthropic), on-premise, drafting only for human review before anything sends or files.
- Now productizing this system as a fixed-scope AI automation offering for other SME distributors — owning solution design, technical delivery, and the client-facing sales proposal end-to-end.

SELECTED PROJECTS

Member & Staff Management Platform — Dream Basketball Academy

Next.js 16 · Supabase / PostgreSQL · Row-Level Security

- Built a full member/staff web platform: authentication, role-based access control, subscription and billing flow, member self-check-in, and a coach-scheduling system with dual-layer conflict detection (per-coach and shared-court).
- Found and fixed a live data-exposure bug in the booking system's row-level-security policy by designing a safe security-definer database function — verified with two separate test accounts.

Fishykart — E-Commerce Storefront

Next.js · GSAP · Tailwind CSS · Vercel

- Built and deployed a 140+ product e-commerce catalogue with animated UI, an automated CC-licensed product-photo sourcing pipeline (with manual QA to catch mismatched species/duplicates), and continuous deployment to Vercel.

Voice Assistant R&D → AI Voice Receptionist

Python · Whisper (speech-to-text) · Neural TTS · Wake-word detection

- Built a wake-word-activated voice assistant with crash-recovery process supervision and automated alerting — the R&D groundwork later productized into the multi-language AI voice receptionist now running live at Pawan Trading Corporation's counter.

Algorithmic Trading Research System

Python · Rule-based risk gating · Automated equity research

- Built a systematic equity-research and paper-trading system with rule-based risk gates (macro-condition screening, balance-sheet ratio checks) for testing trading strategies — a research/simulation tool, not a live brokerage or advisory service.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, React, Next.js

AI / Automation: LLM integration (Claude, Ollama), Telegram Bot API, Whisper, Voice AI / TTS pipelines

Domain Automation: GST return drafting, Tally integration, quotation & collections workflows

Data & Backend: Supabase, PostgreSQL, Row-Level Security, REST APIs

Infra & Deployment: Vercel, macOS launchd, process supervision & alerting

Business: Sales & business development, client proposals, public speaking

EDUCATION

BA, Film Production — Arts University Bournemouth (AUB)

2019
